MIX defaulting to factory settings when powered down

Level of difficulty to modify: **Low**

Issue:

- The MIX UC boiler resets to factory default settings, this includes temp, volume, mode of operation when powered down.
  This means that the font is disabled after a power reset.
- The issue **only occurs if the first button on the font is set to the ambient temperature setting (15C)** See Fig 1.0

Solution:

- A simple Workaround for MIX UC boilers with serial range >0317 <0320 – is to move the ambient temperature to buttons No two or three.

Fig 1.0

- For UC boiler >0320 (with Revision 1.18 software) this will be fixed in the code and no change or consideration of this issue is required.
